

Our TAF mobile team is developing innovative IT solutions for customers of local public transport (ÖPNV). We offer IT full service from a single source. Due to the broad spectrum our employees have many opportunities and their path.

We offer a familiar working environment and looking for

Java Backend Developer (f/m/d) for mobile applications

You are fascinated by mobile applications and have already gathered experience in Backend programming? Then we are looking exactly for you!

As Java Backend Developer you support our team by implementing innovative mobile projects in a creative working environment.

What you can expect.

- Varied activities with plenty of scope for creativity in Jena/Germany
- Challenging projects for well-known customers
- Working in Homeoffice is possible
- Open cooperation in small teams with flat hierarchies
- Permanent position
- Regular team events and soft drinks flatrate

Your tasks concretely.

- Design and development of mobile applications for various platforms
- Further development and optimization of existing mobile applications

You have.

- University degree in Informatics or Business Informatics or comparable education
- Experience in the development of Backend applications and interfaces based on REST principles
- Good knowledge in Java (Spring, Spring Boot, Eclipse)
- Good knowledge with design tools (UML)
- Safe handling with standard tools like Wikis, Jira
- First practical experiences in agile software development methods
- Optional: safe handling with entertainment tools like darts

We are looking forward to receive your application. Please send us your documents.
